## **The new Digital Tachograph from Stoneridge makes driving life easier**

**The new SE5000 Digital Tachograph from Stoneridge features quick card handling and easy manual entries. Step-back facility, larger display icons and input in local time have all been included to make driving life easier.**

### **Simplicity for drivers**

The SE5000 Digital Tachograph has been developed by Stoneridge to be the most user-friendly on the market. The menus have been made easier to understand with a simple menu structure, larger symbols and clear instructions. Manual entries can be entered quickly and it's possible to step backwards to check previous inputs. The calculation of daily driving time has been simplified and allows drivers to check on the time left before their next daily rest.

"Our customers told us they wanted a tachograph that was simple to understand and which let the drivers focus on driving" says Kristofer Wik, Strategic Marketing Director at Stoneridge Electronics. "We have taken this wish very seriously when developing this next generation Digital Tachograph and the feedback we have received from our customers during testing has been very positive." continues Mr Wik.

### **Improved fleet features**

Remote download capability is offered in the new SE5000 and downloading times have been dramatically improved. Other new features include an option for automatic activity change when turning the ignition off, and the option to set calculation of 4 1/2 hour drive time warning according to EC 3820/85 or EC 561/2006. Both of these settings can be changed without visiting a workshop, using the company card.

Uniquely in the industry, nearly all of the features of the SE5000 are programmable, dramatically reducing the number of variants the workshop needs to stock. For the fleet manager or owner, this means replacement tachographs can be available virtually on demand, removing eliminating the need to wait until the correct variant is delivered.

### **Wide-ranging language support**

The new SE5000 supports 24 languages including Russian, and all Cyrillic, Greek and Latin alphabets both on the display and on the printer.

**END**
